

# VST Preset Generator

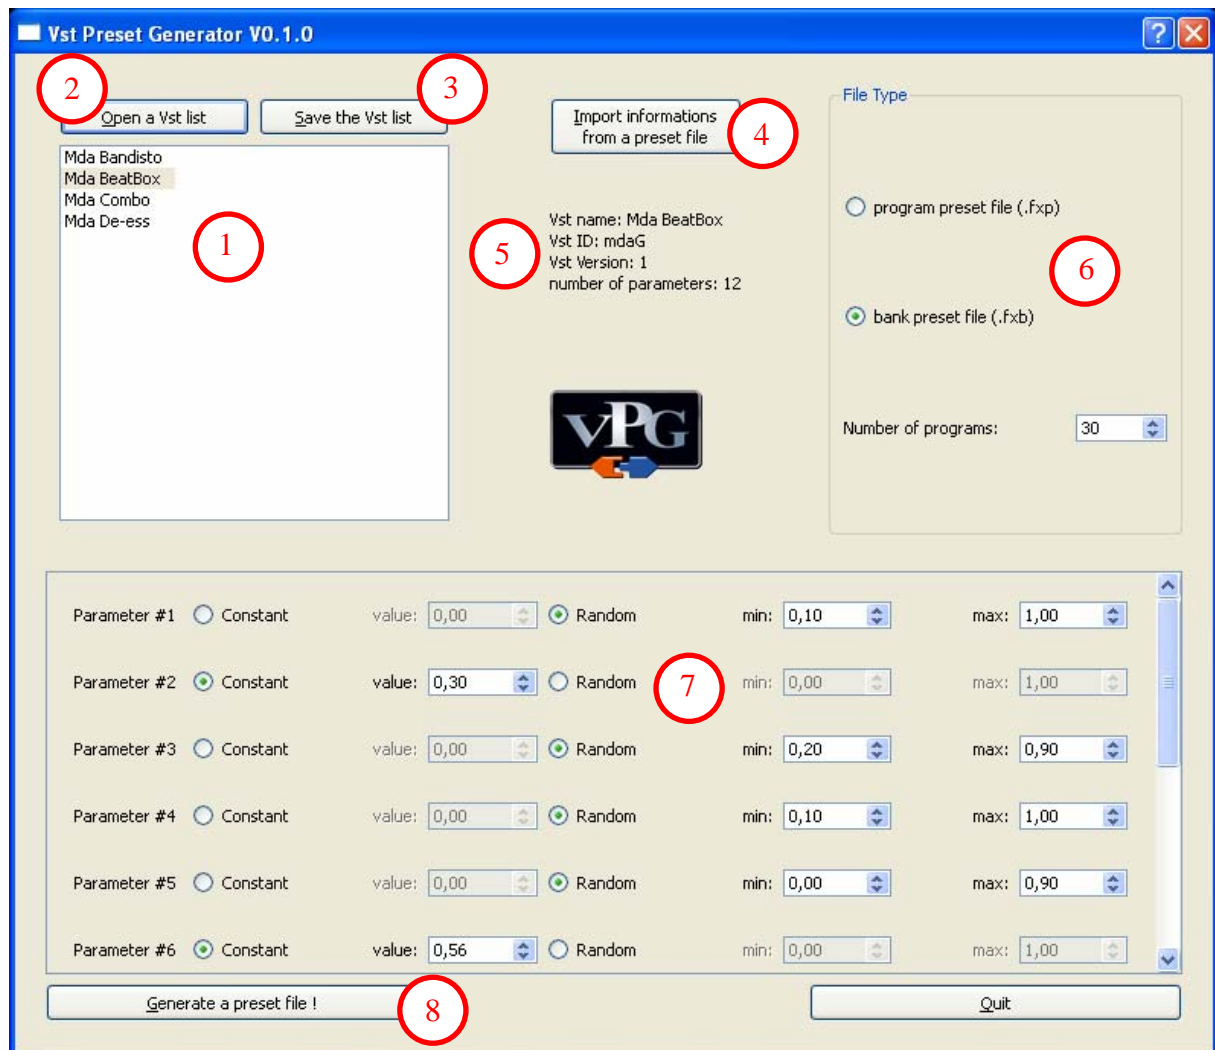

V0.1.0

VST Preset Generator is a program to create random (or semi-randomly) generated preset for most of the VST instruments. It generates fxp (program) or fxb (bank) files you can open with your favourite VST.

You need to have already a fxb or a fxp file from your VST, because the program needs to read some header parameters from these files to create a new one. You simply have to select “save the preset” in your VST Host.

Some VST use the “opaque chunk method” to stock information in the preset file in order to avoid external modification. In this case the VST Preset Generator can not generate randomized file.

## Description

- **1:** List of the VSTs you’ve already opened. When you double-click on a name, the parameters are loaded.

- **2:** Button to open a VST list, e.g. a vpg file. The default file is “user.vpg” and is loading when the program starts.
- **3:** Button to save the actual VST list.
- **4:** Button to open a preset file from a VST, in order to read the parameters.
- **5:** When you’ve loaded VST parameters (from a preset file or in double-clicking in the VST list), the parameters are shown here.
- **6:** When a VST is loading, you can choice the type of preset you want: only a single program or a bank which contains up to 100 programs.
- **7:** For each parameters of the VST, you can choice a constant value or a range. It very useful when you want to fix a parameter (for example the main volume or the waveform of an oscillator)
- **8:** When you’ve finished fixing the parameters, you can generate the file with this button.

## Licence

VST Preset Generator is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.
